

Extensive Usage of SAFE at IITB: May-Dec 2020

With ongoing lockdown restrictions, colleges had to start the semesters with 100% online mode which demands both content delivery/management and online exams. SAFE was able to deliver online exams including subjective quizzes. It was actively used by many departments within IITB and several outside as well. As SAFE does not need much infrastructure, faculties were able to start taking quizzes immediately. Our team is always ready to troubleshoot and support any issue faculties face during their trial/mock or actual tests making sure they are error-free.

SAFE Usage from May till date

Usage within IITB

Highlights

- Due to the simple interface and video guide faculties were able to learn the platform and start conducting quizzes within a week.
- Post-exam, faculties could access all the subjective answers from the manual grading screen and evaluate through rubrics and annotations.
- Students could use their existing phones as the SAFE app works on any android or iOS device, relieving them from making any expense on hardware.
- Within a few minutes after the exam, students were able to view their mark sheets for objective questions; and after the evaluation was completed by faculties for subjective questions, students could see comments and remarks along with the score.
- Faculty were able to download all the quiz data like mark sheets, complete submissions, and logs of any security breaches during the quiz as .pdf or .csv for further scrutiny.
- SAFE ensured that the phone could be used only for the purpose of the exam, during the exam.
- The system was robust to network disruptions before, during, as well as after the exam.
